## ESERCIZIO 1

$$n = 100.10^3 \text{ m}$$
  
 $t = 200 \text{ ms} = 200.10^{-6} \text{ s}$ 

$$m' = 8 (n - n + t) = \frac{100 \cdot 10^3 \text{ m} - 0.950 \text{ c} \cdot 200 \cdot 10^{-6} \text{ s}}{\sqrt{1 - (0.950)^2}}$$

$$t' - \lambda \left( t - \frac{m v_{e}}{c^{2}} \right) = \frac{200.10^{-6} s - (100.10^{3} u \cdot 0.950c) / c^{2}}{\sqrt{1 - (0.950)^{2}}}$$

$$u = \frac{u' + v_t}{1 + \frac{u' v_t}{c^2}} = \frac{-0.560 + 0.100}{1 = 0.100 \cdot 0.560} \cdot c = -0.49 c$$

$$V_{t} = \frac{\Delta n}{\Delta t}$$

$$\Delta n = v_t \cdot \Delta t - v_t \cdot 8 \Delta \gamma = \frac{0.27c \cdot 2.52 \cdot 10^{-8}s}{\sqrt{1 - (0.27)^2}} = \frac{2.12 \text{ in}}{\sqrt{1 - (0.27)^2}}$$
